

MRINMOY NATH

Product Design Leader | Enterprise SaaS, Data and AI Products

mrinmoynathportfolio.netlify.app | nathmrinmoy001@gmail.com | +91 8722979062 | linkedin.com/in/nathmrinmoy

SUMMARY

Product design leader with 9+ years in enterprise SaaS, data platforms and AI products. Co-founded an AI revenue orchestration startup as the product and design lead, with no separate PM. At Whatfix, led design hiring, mentored designers and initiated the information architecture that still organizes the product today. Combines customer discovery and product strategy with hands-on design of complex enterprise workflows.

EXPERIENCE

CopilotGTM | Co-founder, Product and Design

2025 to 2026

- Owned product and design from zero to one for an AI revenue orchestration product for B2B sales teams, without a separate PM. Led 50+ customer conversations with founders, VPs of Sales and presales leaders.
- Shaped the strategy and discovery behind the pivot from a presales assistant to revenue orchestration, after discovery changed the target persona and buyer.
- Designed the deal overview (deal health, risks and blockers, intervention guidance), buying committee intelligence and the briefing room, the three areas customers used most.
- Designed trust patterns for AI output: cited sources, confidence scores, suggestions people approve, and drafts instead of automatic sends. Worked with engineering on a multi-agent architecture with an orchestrator agent.
- Designed a lightweight CRM for smaller customers moving off Zoho and Pipedrive, while larger customers used the intelligence layer on top of their existing CRM.
- Shipped an MVP and a second release, and ran 4 pilots, 2 of them paid. Supported design-partner onboarding, sales demos, investor presentations and early hiring.

Hevo Data | Senior Product Designer

2024 to 2025

- Led UX for pipeline observability with a PM and engineers, helping data engineers find, understand and fix pipeline failures faster.
- Designed drill-down from pipeline to failing job, error insights with the suggested fix next to the error, and a new alerting system (email and webhook) kept separate from in-product notifications.
- Reduced alert noise with grouped failures, cooldowns, severity levels, daily digests, quiet hours and automatic "resolved" alerts.
- Designed onboarding and connector experiences for Salesforce, Snowflake, Amazon S3 and BigQuery.

Fynley | Founder

2023 to 2024

- Founded a B2B SaaS product to make qualitative customer knowledge (interviews, meeting notes) searchable. Owned customer discovery, positioning, UX, prototyping and early market validation.

Whatfix | Senior Product Designer

2019 to 2023

- Led design hiring until the VP of Design joined: interviewed about 200 designers, including leadership candidates, and hired about 20.
- Mentored 5 to 6 designers directly and reviewed design work for 10 to 15 more.
- Initiated the information architecture initiative across three product lines and led a team of 4 designers and researchers until a Design Director took over. Won support from product and engineering leadership; it shipped to all users in 2021 and still organizes Whatfix's navigation.
- Designed content lifecycle management: review stages, selective push to UAT, blocked pushes for unfinished items and version rollback. Tested four prototype concepts with 12 to 15 customers before shipping one.
- Led design reviews and influenced prioritization across product workstreams, including dashboards, analytics and administration.

CGI | UX Designer

2017 to 2019

- Designed enterprise workflow management and business applications for global clients.

SKILLS

Product and research: product strategy, customer discovery, jobs-to-be-done, card sorting, tree testing, usability testing, SUS

Design: information architecture, interaction design, enterprise workflows, dashboards, prototyping, UX patterns

AI product design: explainable AI, confidence and source citation, human-in-the-loop review, agent workflows

Leadership: design hiring, mentoring, design reviews, alignment with Product and Engineering

EDUCATION

M.Des, IIT Guwahati, 2015 to 2017 | B.Tech, Electronics and Communication Engineering, NERIST, 2011 to 2015
