

MRINMOY NATH

Product Design Leader | Enterprise SaaS, Data and AI Products

mrinmoynathportfolio.netlify.app | nathmrinmoy001@gmail.com | +91 8722979062 | Bangalore (open to remote) | linkedin.com/in/nathmrinmoy

SUMMARY

Product design leader with 9 years in enterprise SaaS, data platforms and AI products. Co-founded CopilotGTM and led product and design end to end with no separate PM, reaching 4 pilots, 2 of them paid. At Whatfix, repositioned the analytics platform around Whatfix's own element capture, led the information architecture still used across the product suite, and ran design hiring (about 20 hired from about 200 interviewed).

EXPERIENCE

CopilotGTM | Co-founder, Product and Design Jan 2025 to Aug 2026

- Led product and design from zero to one with no separate PM, setting direction from 50+ conversations with founders, VPs of Sales and presales leaders.
- Ran the first product with 5 U.S. presales design partners, then shaped the strategy behind the pivot to revenue orchestration when discovery showed the persona and buyer were wrong.
- Defined the core product: deal overview (deal health, risks and blockers, intervention guidance), buying committee intelligence and the briefing room, the three areas pilot customers used most.
- Set the trust model for AI output (cited sources, confidence scores, human approval, drafts instead of automatic sends) and partnered with engineering on a multi-agent architecture with an orchestrator agent.
- Built the design system and component library, and designed a lightweight CRM for small customers leaving Zoho and Pipedrive.
- Shipped an MVP and a second release. Supported onboarding, sales demos, investor presentations and early hiring.

Hevo Data | Senior Product Designer Dec 2023 to Dec 2024

- Led UX for pipeline observability with a PM and engineers, for data engineers who debugged failures by reading logs by hand or using third-party tools.
- Introduced Hevo's first alerting system: email and webhook alerts separate from in-product notifications, with grouping, cooldowns, severity levels, daily digests, quiet hours and automatic "resolved" alerts to cut noise.
- Created drill-down from pipeline to failing job, error insights with the suggested fix beside the error, and connector onboarding for Salesforce, Snowflake, Amazon S3 and BigQuery.

Fynley | Founder Apr 2023 to Sep 2023

- Founded a B2B SaaS product that made customer interviews and meeting notes searchable. Owned discovery, positioning, UX and early validation.

Whatfix | Senior Product Designer, design lead for analytics and information architecture Jun 2019 to Mar 2023

- Joined the analytics platform mid-build and changed its direction from feature parity to a differentiated product: advocated using Whatfix's own element capture, so users click on their application and the funnel is built for them, with no event names to remember. Led a team of 4 designers on the new direction.
- Started the information architecture initiative and defined the interaction model for the multi-product suite, leading a team of 4 designers and researchers until a Design Director took over. Shipped to all users in 2021, it reduced customer success queries and still organizes Whatfix's navigation.
- Led design hiring until the VP of Design joined: set up interview loops and rubrics, interviewed about 200 designers including leadership candidates, and hired about 20.
- Shipped content lifecycle management (review stages, selective push to UAT, blocked pushes, version rollback), chosen from four prototype concepts tested with 12 to 15 customers.
- Mentored 5 to 6 designers directly and reviewed work for 10 to 15 more. Set up design critiques and shared UX principles and interaction patterns across product teams.

CGI | UX Designer Aug 2017 to May 2019

- Designed enterprise workflow and business applications for global clients.

SKILLS

Strategy: design vision, roadmapping with PM, customer discovery, jobs-to-be-done, workshops and design sprints

Research: user research, usability testing, card sorting, tree testing, product analytics, A/B testing

Design: information architecture, interaction design, design systems and tokens, data visualization, enterprise workflows, prototyping, accessibility (WCAG), UX writing

AI product design: explainable AI, confidence and source citation, human-in-the-loop review, agent workflows

Leadership: design hiring, interview loops and rubrics, mentoring, design critiques, executive and investor presentations

Tools: Figma, FigJam, Miro, Maze, UserTesting, Claude, Cursor, v0, Lovable

EDUCATION

M.Des, IIT Guwahati, 2015 to 2017 | B.Tech, Electronics and Communication Engineering, NERIST, 2011 to 2015
